

OpenStack Community Activity Report
July-September, 2014
Report sponsored by the OpenStack Foundation

October 30, 2014

AUTHOR Daniel Izquierdo Cortázar
Chief Data Officer
dizquierdo@bitergia.com

AUTHOR Stefano Maffulli
OpenStack Community Manager
stefano@openstack.org

We would like to thank the effort of the following people their effort to provide feedback and validation process.

ACKNOWLEDGEMENTS Thierry Carrez, OpenStack Release Manager
Jesús González-Barahona, Bitergia, Scientist Officer

Finally, this report would not exist without the effort of the people involved in the development of the OpenStack Activity Board, Grimoire toolset and the feedback of the people in the development mailing list of the OpenStack Foundation.

Executive Summary

The second edition of the quarterly OpenStack Community Activity Report¹ shows a healthy community of developers and users, regularly shipping an extremely complicated set of software projects.

In this version of the report, we've started looking at what's causing the long lead times for new patches to merge: are reviewers or original authors slow to respond to comments? We discovered that the mean waiting time for a reviewer has increased sharply after Q3 2013 but people who submit patches are a lot slower to respond to comments, across all projects. New measures are being put into place to identify and solve the root cause of this problem:

- Upstream Training sessions are training new developers in the 'OpenStack way' of developing software
- a new working group for product managers and decision makers
- a study to understand what motivates companies to join OpenStack and their internal organizational structures
- Nova and Neutron core reviewers have started discussions on how to address this problem. Splitting Nova components and changing the way drivers are maintained are among the proposed solutions.

Key findings:

The number of developers involved in OpenStack keeps growing
202 new developers (+21.5%) and +14.2% increase in regular contributors² compared to previous quarter. On average, 567 developers participated in development efforts each month, with a total of 1,139 during the third quarter. Active Core Reviewers almost doubled to 153 from 82 in 2012.

The mean time to merge proposed changes keeps increasing

The time it takes for a proposed patch to go from first proposal to

¹This report is produced quarterly to give Community Managers and OpenStack Foundation's management better insights on development activities and online conversations. The quantitative and qualitative assessment start from tracking actions across all OpenStack git repositories, gerrit code reviews, bug trackers as well as IRC channels, mailing lists and questions/answers.

²These are developers responsible for delivering the 95% of OpenStack's code

final approval and merge is six times longer since Q4 2012. The mean number of patches in each changeset is also increasing, which may be part of the cause. The longer lead times are creating visible friction in the ecosystem.

Nova is still the most active project in terms of commits

Neutron follows, with Horizon and Keystone in fourth and fifth place.

Heat has gone down a couple of positions from the third to fifth place.

Efficiency indicators of OpenStack software development remain stable

Indicators Backlog Management Index, Review Efficiency Index and Time to Merge are fairly stable, with minor oscillations each quarter. These variations appear related to specific roadmap items and seasonal changes, connected to release cycle. On average, the Review Efficiency Index is 0.75, meaning that of 100 changesets submitted, the community of developers is able to close 75 of them either by merging or abandoning them.

Chapter 1

Overview of the Project

1.1 General Activity

The OpenStack Community Activity Report is produced quarterly to give Community Managers and OpenStack Foundation's management better insights on development activities and online conversations. The quantitative and qualitative assessment start from tracking actions across all OpenStack git repositories, gerrit code reviews, bug trackers as well as IRC channels, mailing lists and questions/answers site Ask OpenStack.

The report looks at activities across the OpenStack community during the third quarter of 2014, comparing it to previous eighth quarters.¹.

The analysis aims at providing a detailed view of how the OpenStack project is evolving with special focus on each of the OpenStack programs². OpenStack Integrated Releases are delivered at the beginning of the second and fourth quarters of each year and cycles of development activity are visible in the report: the first and third quarters of the year are periods of higher activity while during the second and fourth ones show other recognizable patterns of activity in the OpenStack ecosystem.

A more detailed information about the community activity comparing two periods: September 2012-September 2013 and September 2013-September 2014, shows an increase in all of the analyzed data sources. Special focus on the increments in the question and answers tool³ and in the

¹The analyzed data sources are available in appendixB

²Each of the projects mentioned are following the analysis of the Programs specified at <http://git.openstack.org/cgit/openstack/governance/tree/reference/programs.yaml>. Besides, the hierarchy of projects and their repositories can be found at the correspondent appendixB

³<https://ask.openstack.org>

IRC channels⁴.

Data source	Activity 365 days	Change (wrt to prev. 365 days)
Gits	52123 commits	59%
Tickets	12172 closed tickets	72%
Mailing Lists	47343 sent emails	97%
Gerrit	58805 submitted reviews	72%
Askbot	5550 posted questions	139%
IRC	1942016 messages	256%

Table 1.1: Activity during the last 365 days and its evolution

Focusing on the development activity, and specially on the integrated programs⁵, the most active in terms of commits is Nova with 1,140 commits in the third quarter of 2014 followed by Neutron with 559 commits and Horizon with 448 commits.

Integrated Project	Commits
nova	1140
neutron	559
horizon	448

trove	112

Table 1.2: Last quarter integrated projects number of commits

1.2 Development and Conversations

Regarding to the community, developers are divided into three main sets, core, regular and occasional⁶. Every quarter in the past two years shows

⁴<http://eavesdrop.openstack.org/irclogs/>

⁵The full list of the repositories analyzed per program is available at B

⁶Contributing developers are characterized as core, regular and occasional depending on their activity in the git repositories. The classification is built by sorting contributors by their total number of commits; we sum the total commits per each individual contributors:

a continuous increase in the levels of core and regular developers. Third quarter of 2014 has the highest levels with 188 core developers and 392 regular ones.

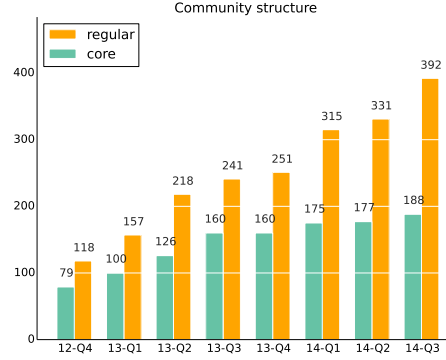

Figure 1.1: Evolution of the last 8 quarters of the core, regular and occasional developers (Git activity)

Period	Core	Regular	Occasional
12-Q4	79	118	174
13-Q1	100	157	236
13-Q2	126	218	277
13-Q3	160	241	384
13-Q4	160	251	360
14-Q1	175	315	477
14-Q2	177	331	429
14-Q3	188	392	559

Table 1.3: Characterization of developers by their total contribution to the OpenStack projects

The mean number of developers per month also shows a continuous increment. The third quarter of 2014 has reached the maximum of the series with a mean of 567 different developers per month.

the individuals whose commits sum up to 80% of the total number of commits in the quarter are the core contributors in that quarter. The regular contributors are those whose commits sum up to 95% of the total. The others are the occasional contributors.

Figure 1.2: Number of developers per month in mean for each quarter

The main organizations⁷ participating in the development are listed in the table below, per project⁸.

Integrated project	Top 1 (commits)	Top 2 (commits)
neutron	Red Hat (72)	Cisco Systems (64)
sahara	Mirantis (156)	Red Hat (52)
ceilometer	Red Hat (45)	Mirantis (34)
horizon	Red Hat (83)	IBM (77)
heat	Red Hat (170)	Mirantis (53)
nova	IBM (329)	Red Hat (198)
trove	Tesora (43)	HP (19)
swift	SwiftStack (34)	Rackspace (29)
glance	Red Hat (41)	IBM (30)
cinder	IBM (48)	SolidFire (32)
keystone	IBM (155)	Metacloud (60)

Table 1.4: Organizations leading the development integrated projects during the last quarter

The most active developers for each of the integrated projects are listed

⁷The details about affiliation between individual contributors and employer is derived from: information provided by the individuals in their Foundation membership data, guessed from corporate email addresses and from manual corrections.

⁸Integrated projects consist of the projects identified as integrated by the Programs yaml file available at <http://git.openstack.org/cgit/openstack/governance/tree/reference/programs.yaml> at the moment of this analysis

in the following table.

Integrated project	Top Contributor	Commits
neutron	Kevin Benton	44
sahara	Andrew Lazarev	53
ceilometer	Nejc Saje	24
horizon	Akihiro MOTOKI	30
heat	Steve Baker	59
nova	garyk	61
trove	Amrith Kumar	22
swift	Samuel Merritt	21
glance	Flavio Percoco	37
cinder	John Griffith	32
keystone	Brant Knudson	81

Table 1.5: Top developers in commits per integrated project during the last quarter

The most popular email threads were focused on the future of the project from several points of view. The thread initiated by Thierry Carrez on August 5th, 2014⁹ focused on the future of the integrated releases, with 185 messages at the moment of this analysis. The second most popular focused on potential issues in Nova, initiated by Daniel P. Berrange on September 4th, 2014¹⁰ with 126 emails at the moment of this analysis. The third largest thread focused on the TC meeting and the Zaqqar community. This thread was initiated by Flavio Percoco on the 4th of September, 2014¹¹ and contains 85 different emails.

1.3 Efficiency

Two metrics have been identified to measure efficiency: the review efficiency index (REI) and the Time to Merge. REI is measured as the number of closed (merged or abandoned) changesets out of the submitted changesets in a given period. Time to Merge is measured as the time since a review is submitted until this is closed. Typical BMI values in the OpenStack Integrated projects rounds a 0.75, what indicates that for 100 opened changesets

⁹<http://lists.openstack.org/pipermail/openstack-dev/2014-August/041929.html>

¹⁰<http://lists.openstack.org/pipermail/openstack-dev/2014-September/044872.html>

¹¹<http://lists.openstack.org/pipermail/openstack-dev/2014-September/044845.html>

in a period, the community closes 75. Besides, the median Time to Merge is of 7.82, having an increase from the previous period.

Integrated project	Reviews Efficiency	Time to Merge (median)
neutron	0.65	7.37 days
sahara	0.91	2.57 days
ceilometer	0.8	7.47 days
horizon	0.7	4.75 days
heat	0.72	13.53 days
nova	0.7	14.92 days
trove	0.69	13.75 days
swift	0.77	5.16 days
glance	0.66	5.27 days
cinder	0.81	5.59 days
keystone	0.82	5.66 days

Table 1.6: Closed changesets out of opened changesets and median Time to Merge in Gerrit

Chapter 2

Per Project break down

This chapter aims at providing a detailed report on the activity of the OpenStack Foundation projects. This is mainly focused on the activity per project as defined, stressing the point on the 'integrated' projects.

Each of the projects is divided into three sections and provides information from the last eight quarters.:

- activity: centered in the following metrics: commits from git activity, submitted, merge and abandoned reviews from the review system and opened and closed tickets from the issue tracking system.
- community: active core reviewers in gerrit, active authors in Git and top ten developers and top ten organizations contributing to the development in the last quarter. of each project.
- process: efficiency closing changesets, Time to Merge (mean and median), number of patchsets (iterations) per changeset and study on the time waiting for a reviewer or submitter action in the patchset review process.

2.1 Overall OpenStack Programs

Activity: Commits in Git, submitted, merged and abandoned reviews in Gerrit and opened and closed issues in Launchpad.

Appendix A

Metrics Definitions

Metrics depicted in each OpenStack program:

- Commit: this is defined as the action(s) that performs a change in the source code. Bots, merges and other type of automatic activity is removed from the records. Besides, when aggregating several Gits, this metric only counts unique revisions (unique hashes found in the Git repositories). Finally, all branches are aggregated to the analysis.
- Submitted changeset: a changeset is the process of peer reviewing source code changes. A commit is not merged to the master code of a given project till this is approved for at least one core reviewer of such project. A submitted changeset is defined as any changeset submitted to the Gerrit system. However, given the limitations of the current version of the tool, with at least 5,900 changesets detected as having an erroneous creation date, this metric counts the first patchset upload action.
- Merged and abandoned changsets: a merge is defined as the patchset that was finally submitted to the source code. An abandoned changeset is a potential merge that was finally dismissed by developers as being part of the source code. This status is found in the status of the final patchset. However, although a patchset can be merged or abandoned, this action can be reverted. If a patchset presents several of these changes in the same period of time, only one of them is counted (the very last one). On the other hand, if those changes take place in different periods of analysis, both status would be counted.
- Open and closed ticket: a ticket in Launchpad is counted as closed if

the status of such ticket is defined as 'Fix Released'. The rest of the tickets are counted as opened tickets.

- **Active Core Reviewer:** a core reviewer has the possibility to use +2 or -2 actions when reviewing the code. However, if there are developers that for some period do not use those actions, those can not be measured as core reviewer. Thus, this metric provides information about 'active' core reviewers. This can be also defined as those developers that actively have used the +2 or -2 review action. Besides, this metric is filtered by branch of activity, only using 'master'. This helps to detect actual core reviewers in each of the projects.
- **Authors:** a developer is defined as author if she is the owner of the patchset sent for reviewing and this is merged into the source code. As previously indicated, automatic commits such bot's are removed from this analysis.
- **Efficiency closing issues:** this metric is a derivation of the Backlog Management Index (BMI) that measures the number of closed tickets out of the opened tickets in a period of time. Values under 1.0 indicates that the number of closing issues is lower than the number of opened issues arriving. On the contrary, higher charts would indicate better maintenance effort by the community.
- **Efficiency closing changesets:** this metric is a derivation of the Backlog Management Index as it is named as Review efficiency index (REI). As similarly used in the BMI index, this metrics measures the number of closed changesets (merged or abandoned) out of the total number of new changesets.
- **Time to Merge:** this time consists of the time between the first upload of the first patchset (as defined as a submitted changeset) till the last patchset of the changeset is merged into the code and this is indicated in the comments side of the Gerrit tool. This metric is provided in number of days.
- **Patchsets per changeset:** this metric calculates the total number of iterations in a changeset till this is abandoned or merged.
- **Time waiting for the reviewer or the submitter:** a changeset is waiting for a reviewer action if a new patchset upload or a new changset arrives to the system. On the other hand, a submitter action is required when

a specific negative verification or reviewing action takes place (Verified -1/-2 or Code-Review -1/-2). In addition, when a Code-Review +2 action takes place, it is assumed that the changset is closing and no more times are registered either for the reviewer or the submitter. For this analysis, those patchsets flagged as work in progress are ignored.

Metrics depicted in the general overview:

- Community structure, core, regular and casual developers: developers are ordered in descendant order by the number of commits authored for a given period. Core developers are defined as the list of developers that reach 80% of the total commits. Regular is the set of developers that are between that 80% and 95% of the commits. Casual developers are found in the rest of the 5%. Bots are ignored in this list of developers.
- Developer per month: average of developers per month ignoring bots.
- Emails sent: number of emails sent by people to the several mailing lists. Bots are not registered.
- People sending emails: number of people sending those emails ignoring bots.
- People initiating threads: a thread is defined as a list of emails that has the same root. There may exist threads of one email.
- Top threads: this list provides the longest threads in terms of number of emails that have a common root email.
- Questions, answers and comments in Askbot.
- People asking questions in Askbot: number of people sending a new question.
- Top visited questions.
- Top tags: each of the questions has a list of associated tags. The top tags are those with the highest number of repetitions aggregating all of the questions.
- Messages and people in IRC: this analysis ignores as a message those entries in the IRC channels that provide information about people entering or leaving the system.

Appendix B

Source Code and Data Sources

The data source used to provide the data of this analysis can be found at the GrimoireLib library. Specifically the `openstack_report.py` file¹.

With respect to the list of analyzed repositories per project, the following table lists all of them. There are three data sources: git activity (scm), tickets activity (its) and review activity (scr). This information is based on the information listed in the yaml organizational file² provided by the OpenStack Foundation.

Program	Data source	Repository
barbican	its	https://bugs.launchpad.net/barbican
barbican	scm	git://git.openstack.org/openstack/kite
barbican	scm	git://git.openstack.org/openstack/barbican
