

OpenStack Community Activity Report
October-December, 2014
Report sponsored by the OpenStack Foundation

December 4, 2014

AUTHOR Daniel Izquierdo Cortázar
Chief Data Officer
dizquierdo@bitergia.com

AUTHOR Stefano Maffulli
OpenStack Community Manager
stefano@openstack.org

We would like to thank the effort of the following people their effort to provide feedback and validation process.

Finally, this report would not exist without the effort of the people involved in the development of the OpenStack Activity Board, Grimoire toolset and the feedback of the people in the development mailing list of the OpenStack Foundation.

Executive Summary

Contents

1	Overview of the Project	5

Chapter 1

Overview of the Project

1.1 General Activity

A more detailed information about the community activity ...

Data source	Activity 365 days	Change (wrt to prev. 365 days)
Gits	47960 commits	26%
Tickets	10897 closed tickets	37%
Mailing Lists	40986 sent emails	28%
Gerrit	53841 submitted reviews	31%
Askbot	4094 posted questions	25%
IRC	1866172 messages	130%

Table 1.1: Activity during the last 365 days and its evolution

Focusing on the development activity,

Integrated Project	Commits
neutron	304

glance	98
cinder	182
keystone	124
ironic	110

Table 1.2: Last quarter integrated projects number of commits

1.2 Development and Conversations

Regarding to the community, developers are divided into three main sets, core, regular and occasional¹.

¹Contributing developers are characterized as core, regular and occasional depending on their activity in the git repositories. The classification is built by sorting contributors by their total number of commits; we sum the total commits per each individual contributors: the individuals whose commits sum up to 80% of the total number of commits in the quarter are the core contributors in that quarter. The regular contributors are those whose commits sum up to 95% of the total. The others are the occasional contributors.

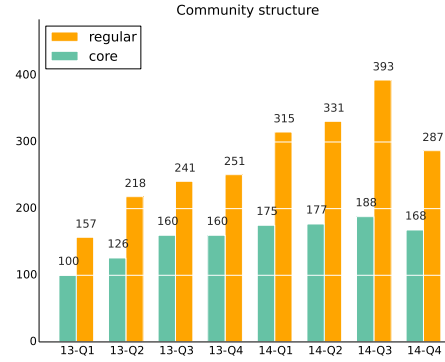

Figure 1.1: Evolution of the last 8 quarters of the core, regular and occasional developers (Git activity)

Period	Core	Regular	Occasional
13-Q1	100	157	236
13-Q2	126	218	277
13-Q3	160	241	384
13-Q4	160	251	360
14-Q1	175	315	477
14-Q2	177	331	429
14-Q3	188	393	559
14-Q4	168	287	317

Table 1.3: Characterization of developers by their total contribution to the OpenStack projects

The mean number of developers per month

Figure 1.2: Number of developers per month in mean for each quarter

The main organizations² participating in the development are listed in the table below, per project³.

Integrated project	Top 1 (commits)	Top 2 (commits)
neutron	Red Hat (71)	Bit Switch Networks (41)
sahara	Mirantis (63)	Red Hat (20)
ceilometer	IBM (27)	Mirantis (19)
horizon	IBM (36)	Red Hat (34)
heat	Red Hat (96)	Mirantis (35)
nova	IBM (168)	Red Hat (58)
trove	Rackspace (12)	Tesora (10)
swift	SwiftStack (14)	Rackspace (11)
glance	HP (30)	NTT (13)
cinder	IBM (18)	Red Hat (16)
keystone	IBM (63)	Red Hat (16)
ironic	HP (18)	Mirantis (13)

Table 1.4: Organizations leading the development integrated projects during the last quarter

²The details about affiliation between individual contributors and employer is derived from: information provided by the individuals in their Foundation membership data, guessed from corporate email addresses and from manual corrections.

³Integrated projects consist of the projects identified as integrated by the Programs yaml file available at <http://git.openstack.org/cgit/openstack/governance/tree/reference/programs.yaml> at the moment of this analysis

The most active developers for each of the integrated projects are listed in the following table.

Integrated project	Top Contributor	Commits
neutron	Kevin Benton	41
sahara	Sergey Reshetnyak	25
ceilometer	Gordon Chung	20
horizon	Akihiro MOTOKI	26
heat	Steven Hardy	37

cinder	John Griffith	14
keystone	Steve Martinelli	21
ironic	Lucas Alvares Gomes	15

Table 1.5: Top developers in commits per integrated project during the last quarter

The most popular email threads

1.3 Efficiency

Two metrics have been identified to measure efficiency: the review efficiency index (REI) and the Time to Merge. REI is measured as the number of closed (merged or abandoned) changesets out of the submitted changesets in a given period. Time to Merge is measured as the time since a review is submitted until this is closed. Typical BMI values in the OpenStack Integrated projects rounds a 0.75, what indicates that for 100 opened changesets in a period, the community closes 75. Besides, the median Time to Merge is of 7.82, having an increase from the previous period.

Integrated project	Reviews Efficiency	Time to Merge (median)
neutron	0.67	6.56 days
sahara	0.78	1.87 days
ceilometer	0.75	2.73 days
horizon	0.61	2.98 days
heat	0.71	3.7 days
nova	0.54	9.13 days
trove	0.65	10.95 days
swift	0.67	2.8 days
glance	0.6	10.53 days
cinder	0.8	3.22 days
keystone	0.54	5.75 days
ironic	0.8	1.7 days

Table 1.6: Closed changesets out of opened changesets and median Time to Merge in Gerrit

Chapter 2

Per Project break down

This chapter aims at providing a detailed report on the activity of the OpenStack Foundation projects. This is mainly focused on the activity per project as defined, stressing the point on the 'integrated' projects.

Each of the projects is divided into three sections and provides information from the last eight quarters.:

- activity: centered in the following metrics: commits from git activity, submitted, merge and abandoned reviews from the review system and opened and closed tickets from the issue tracking system.
- community: active core reviewers in gerrit, active authors in Git and top ten developers and top ten organizations contributing to the development in the last quarter. of each project.
- process: efficiency closing changesets, Time to Merge (mean and median), number of patchsets (iterations) per changeset and study on the time waiting for a reviewer or submitter action in the patchset review process.

2.1 Overall OpenStack Programs

Activity: Commits in Git, submitted, merged and abandoned reviews in Gerrit and opened and closed issues in Launchpad.

Appendix A

Metrics Definitions

Metrics depicted in each OpenStack program:

- Commit: this is defined as the action(s) that performs a change in the source code. Bots, merges and other type of automatic activity is removed from the records. Besides, when aggregating several Gits, this metric only counts unique revisions (unique hashes found in the Git repositories). Finally, all branches are aggregated to the analysis.
- Submitted changeset: a changeset is the process of peer reviewing source code changes. A commit is not merged to the master code of a given project till this is approved for at least one core reviewer of such project. A submitted changeset is defined as any changeset submitted to the Gerrit system. However, given the limitations of the current version of the tool, with at least 5,900 changesets detected as having an erroneous creation date, this metric counts the first patchset upload action.
- Merged and abandoned changsets: a merge is defined as the patchset that was finally submitted to the source code. An abandoned changeset is a potential merge that was finally dismissed by developers as being part of the source code. This status is found in the status of the final patchset. However, although a patchset can be merged or abandoned, this action can be reverted. If a patchset presents several of these changes in the same period of time, only one of them is counted (the very last one). On the other hand, if those changes take place in different periods of analysis, both status would be counted.
- Open and closed ticket: a ticket in Launchpad is counted as closed if

the status of such ticket is defined as 'Fix Released'. The rest of the tickets are counted as opened tickets.

- **Active Core Reviewer:** a core reviewer has the possibility to use +2 or -2 actions when reviewing the code. However, if there are developers that for some period do not use those actions, those can not be measured as core reviewer. Thus, this metric provides information about 'active' core reviewers. This can be also defined as those developers that actively have used the +2 or -2 review action. Besides, this metric is filtered by branch of activity, only using 'master'. This helps to detect actual core reviewers in each of the projects.
- **Authors:** a developer is defined as author if she is the owner of the patchset sent for reviewing and this is merged into the source code. As previously indicated, automatic commits such bot's are removed from this analysis.
- **Efficiency closing issues:** this metric is a derivation of the Backlog Management Index (BMI) that measures the number of closed tickets out of the opened tickets in a period of time. Values under 1.0 indicates that the number of closing issues is lower than the number of opened issues arriving. On the contrary, higher charts would indicate better maintenance effort by the community.
- **Efficiency closing changesets:** this metric is a derivation of the Backlog Management Index as it is named as Review efficiency index (REI). As similarly used in the BMI index, this metrics measures the number of closed changesets (merged or abandoned) out of the total number of new changesets.
- **Time to Merge:** this time consists of the time between the first upload of the first patchset (as defined as a submitted changeset) till the last patchset of the changeset is merged into the code and this is indicated in the comments side of the Gerrit tool. This metric is provided in number of days.
- **Patchsets per changeset:** this metric calculates the total number of iterations in a changeset till this is abandoned or merged.
- **Time waiting for the reviewer or the submitter:** a changeset is waiting for a reviewer action if a new patchset upload or a new changset arrives to the system. On the other hand, a submitter action is required when

a specific negative verification or reviewing action takes place (Verified -1/-2 or Code-Review -1/-2). In addition, when a Code-Review +2 action takes place, it is assumed that the changset is closing and no more times are registered either for the reviewer or the submitter. For this analysis, those patchsets flagged as work in progress are ignored.

Metrics depicted in the general overview:

- Community structure, core, regular and casual developers: developers are ordered in descendant order by the number of commits authored for a given period. Core developers are defined as the list of developers that reach 80% of the total commits. Regular is the set of developers that are between that 80% and 95% of the commits. Casual developers are found in the rest of the 5%. Bots are ignored in this list of developers.
- Developer per month: average of developers per month ignoring bots.
- Emails sent: number of emails sent by people to the several mailing lists. Bots are not registered.
- People sending emails: number of people sending those emails ignoring bots.
- People initiating threads: a thread is defined as a list of emails that has the same root. There may exist threads of one email.
- Top threads: this list provides the longest threads in terms of number of emails that have a common root email.
- Questions, answers and comments in Askbot.
- People asking questions in Askbot: number of people sending a new question.
- Top visited questions.
- Top tags: each of the questions has a list of associated tags. The top tags are those with the highest number of repetitions aggregating all of the questions.
- Messages and people in IRC: this analysis ignores as a message those entries in the IRC channels that provide information about people entering or leaving the system.

Appendix B

Source Code and Data Sources

The data source used to provide the data of this analysis can be found at the GrimoireLib library. Specifically the `openstack_report.py` file¹.

With respect to the list of analyzed repositories per project, the following table lists all of them. There are three data sources: git activity (scm), tickets activity (its) and review activity (scr). This information is based on the information listed in the yaml organizational file² provided by the OpenStack Foundation.

Program	Data source	Repository
barbican	its	https://bugs.launchpad.net/barbican
barbican	scm	git://git.openstack.org/openstack/kite
barbican	scm	git://git.openstack.org/openstack/barbican
barbican	scr	review.openstack.org_openstack/kite
barbican	scr	review.openstack.org_openstack/barbican
ceilometer	its	https://bugs.launchpad.net/ceilometer
ceilometer	scm	https://github.com/openstack/ceilometer.git
ceilometer	scr	review.openstack.org_openstack/ceilometer
cinder	its	https://bugs.launchpad.net/cinder
cinder	scm	https://github.com/openstack/cinder.git
cinder	scr	review.openstack.org_openstack/cinder
