# OpenStack Community Activity Report January-March, 2015 Report sponsored by the OpenStack Foundation

April 6, 2015

AUTHOR Daniel Izquierdo Cortázar

Chief Data Officer

dizquierdo@bitergia.com

AUTHOR Stefano Maffulli

OpenStack Developer Advocate

stefano@openstack.org

This report would not exist without the effort of the people involved in the development of the OpenStack Activity Board, Grimoire toolset and the feedback of the people in the development mailing list of the OpenStack Foundation.

#### **Executive Summary**

The January-March 2015 summary of OpenStack Community Activity Report<sup>1</sup> starts to show the maturity reached by the project, with most metrics remaining stable compared to previous quarters. However the project keeps growing as observed with a minimum increase of activity of a 4% if compared to the previous year.

#### Key findings:

#### New peak of code developers

The community of developers is the highest of the whole history. This has reached a mean of 556 developers per month during the last quarter. This increase also affects the number of core and regular developers, having an increase of more than a 10% in the first case and more than a 20% of increase in the second case. Both cases are compared to the last quarter of 2014.

#### Development process keeps improving

Focusing on the integrated projects, the community seems to keep stable, with similar numbers to previous release timeframe (2014-q3). Although the time to merge has increased in mean, the median seems to be stable and in any case smaller than the time to merge of the previous release timeframe. Indeed it is clear the effort undertaken by the core reviewers given that the time to attend patchsets keeps decreasing in mean and median. While one year ago, it took around 7.3 days to attend changes by the submitters, nowadays this time takes 5.1 days in mean. This is half of the time if we focus on the median, going down from 1 day to 0.52 days.

#### Submitters time to respond starts to decrease

This is indeed the first quarter where the time waiting for the submitter has decreased if compared to the previous quarter and this takes place in the integrated and incubated projects. These values may be the result of the OpenStack Foundation training policies regarding to newcomers.

<sup>&</sup>lt;sup>1</sup>This report is produced quarterly to give Community Managers and OpenStack Foundation's management better insights on development activities and online conversations. The quantitative and qualitative assessment start from tracking actions across all OpenStack git repositories, gerrit code reviews, bug trackers as well as IRC channels, mailing lists and questions/answers.

# Chapter 1

# Overview of the Project

The OpenStack Community Activity Report is produced quarterly to give Community Managers and OpenStack Foundation's management better insights on development activities and online conversations. The quantitative and qualitative assessment start from tracking actions across all OpenStack git repositories, gerrit code reviews, bug trackers as well as IRC channels, mailing lists and questions/answers site Ask OpenStack.

The report looks at activities across the OpenStack community during the first quarter of 2015, comparing it to previous eight quarters.<sup>1</sup>.

The analysis aims at providing a detailed view of how the OpenStack project is evolving with special focus on each of the OpenStack programs<sup>2</sup>. OpenStack Integrated Releases are delivered at the beginning of the second and fourth quarters of each year and cycles of development activity are visible in the report: the first and third quarters of the year are periods of higher activity while during the second and fourth ones show other recognizable patterns of activity in the OpenStack ecosystem.

 $<sup>^1{\</sup>rm The}$  analyzed data sources are available in appendix B

<sup>&</sup>lt;sup>2</sup>Each of the projects mentioned are following the analysis of the Programs specified at http://git.openstack.org/cgit/openstack/governance/tree/reference/programs.yaml. In addition, the hierarchy of projects and their repositories can be found at the correspondent appendixB

Data source	Activity 365 days	Change (wrt to prev. 365 days)
$\operatorname{Gits}$	53930 commits	9%
Tickets	12290 closed tickets	33%
Mailing Lists	41410 sent emails	4%
Gerrit	55329 submitted reviews	10%
Askbot	6311 posted questions	46%
IRC	1656479 messages	33%

Table 1.1: Activity during the last 365 days and its evolution

The activity around code, from merged commits to code reviews seems to be stable, while bug fixes and conversations on IRC and Ask OpenStack keep increasing, compared to previous year.

In this first quarter of 2015 the mean number of developers active per month has increased till 556, the highest in the studied history so far.

Period	Authors per month
13-Q2	319.5
13-Q3	392.0
13-Q4	394.5
14-Q1	487.0
14-Q2	476.5
14-Q3	536.0
14-Q4	467.5
15-Q1	556.0

In addition in order to characterize developers, those are divided into three main sets: core, regular and casual<sup>3</sup>. The three levels of characterization have reached the highest number of authors. While the casual developers seem to remain stable, core and regular ones show an increase of more than a 10%.

 $<sup>^3</sup>$ Contributing developers are characterized as core, regular and casual depending on their activity in the git repositories. The classification is built by sorting contributors by their total number of commits; we sum the total commits per each individual contributors: the individuals whose commits sum up to 80% of the total number of commits in the quarter are the core contributors in that quarter. The regular contributors are those whose commits sum up to 95% of the total. The others are the casual contributors.

Figure 1.1: Evolution of the last 8 quarters of the core, regular and casual developers (Git activity)

Period	Core	Regular	Occasional
13-Q2	128	212	300
13-Q3	159	235	393
13-Q4	169	250	372
14-Q1	182	310	487
14-Q2	173	322	463
14-Q3	182	356	547
14-Q4	178	329	461
15-Q1	198	407	549

Table 1.2: Characterization of developers by their total contribution to the OpenStack projects

This report aims to provide some insights about the software development process of the OpenStack community measuring efficiency and process of the community based on three metrics: the Review Efficiency Index (REI), the Time to Merge (TTM), and the Backlog Management Index (BMI). REI is measured as the number of closed (merged or abandoned) changesets out of the submitted changesets in a given period. TTM is measured as the time since a review is submitted until this is closed. The BMI is measured as the number of closed tickets out of open tickets in a given period.

Integrated project	$\mathbf{REI}$	BMI	$\mathbf{TTM}$
neutron	0.78	0.71	$5.1  \mathrm{days}$
sahara	0.86	0.82	$4.85  \mathrm{days}$
ceilometer	0.85	0.67	$3.88  \mathrm{days}$
horizon	0.73	0.64	$3.2  \mathrm{days}$
heat	0.84	0.83	4.07 days
nova	0.68	0.64	13.17 days
trove	0.79	0.75	$7.08  \mathrm{days}$
$\operatorname{swift}$	0.76	0.34	2.23 days
glance	0.74	0.59	13.22 days
cinder	0.69	0.67	5.32 days
keystone	0.77	0.7	$6.06  \mathrm{days}$

Table 1.3: Closed changesets out of opened changesets (REI), closed ticket out of opened tickets (BMI) and median time to merge in Gerrit (TTM)

# Chapter 2

# Communication and Support-Related Activities

The OpenStack community uses several channels for communication and support-related activities. Mailing lists were initially the key place for communications, although part of the activity is moving to the questions and answers tool in the Ask OpenStack site.

#### 2.1 Mailing Lists

The following charts show activity in terms of emails sent, people sending emails and people initiating threads per quarter. In addition, two tables are presented with the hot topics in the several analyzed mailing lists. First table shows hot topics ordered by number of total posts in such thread, while the second table shows hot topics ordered by the total number of different participants in the discussions. The two tables are based on the last quarter period of activity.

Period 13-Q2 13-Q3	Emails 5553 8190

## Chapter 3

# Details on OpenStack Integrated and Incubated projects

Each breakdown is divided into three sections with information from the last eight quarters:

- activity: centered in the following metrics: commits from git activity, submitted, merge and abandoned reviews from the review system and opened and closed tickets from the issue tracking system.
- community: active core reviewers in gerrit, active authors in git and top ten developers and top ten organizations contributing to the development in the last quarter. of each project.
- process: efficiency closing tickets, efficiency closing changesets, Time to Merge (mean and median), number of patchsets (iterations) per changeset and study on the time waiting for a reviewer or submitter action in the patchset review process.

Details on individual OpenStack programs are provided in separate documents on git.openstack.org/cgit/openstack-infra/activity-board/tree/reports/2015-q1.

## 3.1 Overview of OpenStack Programs

## 3.2 Activity

Commits in Git, submitted, merged and abandoned reviews in Gerrit and opened and closed issues in Launchpad.

## Appendix A

## Metrics Definitions

Metrics measured in each OpenStack program:

- Commit: this is defined as the action(s) that performes a change in the source code. Bots, merges and other type of automatic activity is removed from the records. In addition, when aggregating several git repositories, this metric only counts unique revisions (unique hashes found in the git repositories). Finally, all branches are aggregated to the analysis.
- Submitted changeset: a changeset is the process of peer reviewing source code changes. A commit is not merged to the master code of a given project till this is approved for at least one core reviewer of such project. A submitted changeset is defined as any changeset submitted to the Gerrit system. However, given the limitations of the current version of the tool, with at least 5,900 changesets detected as having an erroneous creation date, this metric counts the first patchset upload action.
- Merged and abandoned changsets: a merge is defined as the patchset that was finally submitted to the source code. An abandoned changeset is a potential merge that was finally dismissed by developers as being part of the source code. This status is found in the status of the final patchset. However, although a patchset can be merged or abandoned, this action can be reverted. If a patchset presents several of these changes in the same period of time, only one of them is counted (the very last one). On the other hand, if those changes take place in different periods of analysis, both status would be counted.

- Open and closed ticket: a ticket in Launchpad is counted as closed if the status of such ticket is defined as 'Fix Released'. The rest of the tickets are counted as opened tickets.
- Active Core Reviewer: a core reviewer has the possibility to use +2 or -2 actions when reviewing the code. However, if there are developers that for some period do not use those actions, those can not be measured as core reviewer. Thus, this metric provides information about 'active' core reviewers. This can be also defined as those developers that actively have used the +2 or -2 review action. This metric is also filtered by branch of activity, only using 'master'. This helps to detect actual core reviewers in each of the projects.
- Authors: a developer is defined as author if she is the owner of the
  patchset sent for reviewing and this is merged into the source code.
  As previously indicated, automatic commits such bot's are removed
  from this analysis.
- Efficiency closing issues: this metric is a derivation of the Backlog Management Index (BMI) that measures the number of closed tickets out of the opened tickets in a period of time. Values under 1.0 indicates that the number of closing issues is lower than the number of opened issues arriving. On the contrary, higher charts would indicate better maintenance effort by the community.
- Efficiency closing changesets: this metric is a derivation of the Backlog Management Index as it is named as Review efficiency index (REI). As similarly used in the BMI index, this metrics measures the number of closed changesets (merged or abandoned) out of the total number of new changesets.
- Time to Merge: this time consists of the time between the first upload of the first patchset (as defined as a submitted changeset) till the last patchset of the changeset is merged into the code and this is indicated in the comments side of the Gerrit tool. This metric is provided in number of days.
- Patchsets per changeset: this metric calculates the total number of iterations in a changeset till this is abandoned or merged.
- Time waiting for the reviewer or the submitter: a changeset is waiting for a reviewer action if a new patchset upload or a new changset arrives

to the system. On the other hand, a submitter action is required when a specific negative verification or reviewing action takes place (Verified -1/-2 or Code-Review -1/-2). In addition, when a Code-Review +2 action takes place, it is assumed that the changest is closing and no more times are registered either for the reviewer or the submitter. For this analysis, those patchesets flagged as work in progress are ignored.

#### Metrics measured in the general overview:

- Community structure, core, regular and casual developers: developers are ordered in descendant order by the number of commits authored for a given period. Core developers are defined as the list of developers that reach 80% of the total commits. Regular is the set of developers that are between that 80% and 95% of the commits. Casual developers are found in the rest of the 5%. Bots are ignored in this list of developers.
- Developer per month: average of developers per month ignoring bots.
- Emails sent: number of emails sent by people to the several mailing lists. Bots are not registered.
- People sending emails: number of people sending those emails ignoring bots.
- People initiating threads: a thread is defined as a list of emails that has the same root. There may exist threads of one email.
- Top threads: this list provides the longest threads in terms of number of emails that have a common root email.
- Questions, answers and comments in Askbot.
- People asking questions in Askbot: number of people sending a new question.
- Top visited questions.
- Top tags: each of the questions has a list of associated tags. The top tags are those with the highest number of repetitions aggregating all of the questions.
- Messages and people in IRC: this analysis ignores as a message those entries in the IRC channels that provide information about people entering or leaving the system.

## Appendix B

## Source Code and Data Sources

The data source used to provide the data of this analysis can be found at the GrimoireLib library. Specifically the openstack\_report.py file<sup>1</sup>.

With respect to the list of analyzed repositories per project, the following table lists all of them. There are three data sources: git activity (scm), tickets activity (its) and review activity (scr). This information is based on the information listed in the yaml organizational file<sup>2</sup> provided by the OpenStack Foundation.

Program	Data	Repository
